Mitsubishi Electric Identifies stimulus fund-eligible products

Mitsubishi Electric U.S. Group Holdings has identified its energy, building services and transportation products and technologies that may qualify for federal stimulus funding under the American Recovery and Reinvestment Act (ARRA). The products include power generation and transmission; rail transportation; heating and cooling; elevators and escalators; solar panels; water treatment; display technologies; and uninterruptible power supplies.

With sales, engineering, and manufacturing locations throughout the United States, the Mitsubishi Electric U.S. companies are especially well-positioned to assist with infrastructure modernization projects.

Mitsubishi Electric has been a key provider of energy infrastructure to U.S. electric utilities for decades, and is the preferred provider of thousands of business and property owners for energy-efficient climate control systems, elevators and escalators, power supplies and controls. Through a variety of products, Mitsubishi Electric U.S. contributes to energy efficiency and long-term cost savings in high-performance green buildings, school and data center modernizations, education facilities, low-income housing, federal buildings, and more.

Mitsubishi Electric's U.S. companies and products are members of, have been certified by, or meet the standards of most leading environmental or quality assurance organizations including the U.S. Green Building Council, ISO9001, ISO114001, LEED, SEER, AHRI, ASHRAE, QS-9000, EnergyStar and RoHS.
