

## Starter OCP Conversion Guide

**Safety Precautions:**

- \* Always conversion with transmission set in neutral or park, parking brake set, and all electrical loads off.
- \* Wear face and eye protection at all times while performing conversion

Following this worksheet will guide you through the replacement of a failed starter that required OCP protection to a Mitsubishi Electric 105P55 starter that does not require OCP.

To convert a vehicle's starting system for use with the Mitsubishi 105P55, cut the two wires leading to the OCP plug. Connect these two wires with a Butt-end connector.
